Permit Application: Soil Erosion and Sediment Control Program

Why are permits needed? Clean water is important. Sediment is considered the leading pollutant in Michigan’s waterways. Fertilizers, petrochemicals, and other pollutants easily attach to sediment particles and are carried into waterways by erosion. Sediments pollute water bodies, covering fish habitat and spawning beds.

Who needs an application? Applications are required for any soil disturbance:

- within 500 feet of a body of water, i.e., river, stream, creek, lake or
- if you are disturbing over 1 acre of land, no matter the distance to water.

Waivers are available for some projects of small size or duration. Waivers must be filed before starting the project. **Permits are not issued the same day applications are received and require an initial site inspection.** Permits remain open for one year. Once soils are stabilized, sites are no longer at risk of erosion; then permits are closed.

Residential and Commercial Prioritization Matrix and Fee Schedule		
Application fee \$15; permit duration 1 year; extension period 1 year		
Project Priority /Fee	Inspection Frequency	Description
High priority \$295 Extension \$150	Inspection at least 1 time every 2 weeks of open permit, OR after significant rain events	Earth disturbance is <i>over 5 acres</i> AND has a <i>direct connection</i> (immediately adjacent to or point source discharge to) <i>surface waters or adjacent property.</i> OR Commercial (gravel pits, schools, utilities, businesses).
Moderate Priority \$150 Extension \$75	Inspection at least once per month	Earth disturbance <i>over 5 acres with no direct connection</i> to surface water or adjacent property OR Site <i>under 5 acres with direct connection</i> to surface water or adjacent property.
Low Priority \$125 Extension \$65	Inspection at least once every 2 months	Earth disturbance <i>under 5 acres</i> AND <i>no direct connection</i> to surface water or adjacent property.
Very Low Priority \$100 Extension \$50	<ul style="list-style-type: none"> • inspection prior to issuance, and • after control measures are in place based on construction schedule, and • upon confirmation of site stabilization and closure 	Earth disturbance less than 1 acre AND flat site with more than 50 feet of established buffer on sandy or light soils. OR for a farm holding the following status: NRCS Conservation Plan, MAEAP verification, OR DEGLE CAPO
Agricultural Construction projects do not receive exemptions. These include: Barn construction; Silage pad/Leachate containment construction; Agrichemical handling facilities; Buildings for livestock, dry feed or equipment; Driveways and parking areas; Manure pits. See exemptions at http://missaukeecd.org/maeap/permit-exemptions-for-agriculture/ .		
Very Low Priority \$100	See description above.	Farm holds the following status: NRCS Conservation Plan, MAEAP verification, EGLE CAFO
Other		
\$50-\$100	N/A	Fees assessed for disturbing soils under any of the above descriptions without an SESC permit.

This matrix is intended to provide an overview for how sites are prioritized for inspection in Missaukee County. However, the Missaukee County Enforcing Agency reserves the right to use additional criteria (such as soil type, slope, and type of resource at risk) as mitigating circumstances when deciding whether a site is High, Moderate, Low, or Very Low priority. At a minimum, all sites will be inspected prior to permit issuance and upon confirmation of site stabilization and closure, as required by state law. Site prioritizations do not limit the frequency or amount of inspections; additional inspections will be conducted at the discretion of agents.

Landowners or contractors may complete the application. A letter of consent (or filling out the form below) with the landowner's signature is required if the contractor or other designated agent is signing the application. Both are responsible for making sure the plan, as documented on the application, is followed. Applications are intended to help landowners develop a suitable plan to prevent erosion. Preventative measures to control erosion are far cheaper than the costs of cleaning after erosion occurs. If sediment enters water or project alters flow to neighboring properties, cleanup will be required and civil fines may be incurred.

Permits must be applied for *prior to* obtaining a building permit. **If soil is disturbed prior to obtaining a Soil Erosion and Sedimentation Control (SESC) permit, additional fees are charged.** Application is to be completed to the best of applicant's ability. SESC Agent determines the permit fee based on the project's priority. Schedule an appointment if you would like free assistance. It is recommended that the landowner or designated agent meets the SESC agent at the site. **Any changes to the proposed earth change activities made to the project after submission of the permit application must be presented to and approved by the soil erosion officer before the changes have started.** Missaukee Conservation District will provide application copies free of charge. Additional information (application, waivers, and best management practice guides for the proper use and installation of SESC measures for the prevention of soil erosion) are posted at <http://missaukee.cd.org/soil-erosion/>.

Legal Setbacks and Additional Permitting: Norwich, Pioneer, Bloomfield, Caldwell and Forest Townships on creeks feeding into the Manistee River have setback restrictions. This area is part of the Upper Manistee River Watershed and part of the Natural Rivers Act. It requires an additional free permit through Michigan Natural Rivers Program. Contact Brian Bury, Upper Manistee River State Zoning Administrator, at 989.732.3541, ext. 5088, or e-mail buryb@michigan.gov. Projects close to wetlands or along shorelines of lakes and streams are subject to additional permit requirements. For additional information, contact Jake Riley, EGLE Water Resources Division at 231.876.4443.

Part 91 of PA 451, which governs the Soil Erosion and Sedimentation Control Program, can be read by clicking on the following link, <http://legislature.mi.gov/doc.aspx?mcl-451-1994-ii-2-soil-conservation-erosion-and-sedimentation-control-91>.

Silt Fence Installation

Correct installation is critical. Silt fence will not work on all sites. If not installed properly, they can be useless. For more information, ask this office for DEQ's Best Management Practice guide for silt fence. **Landowners will be required to fix improperly installed fences and may be subject to violations if their improper use results in sediment leaving the property.**

- Must be trenched in a minimum of six inches
- Install stakes on the down-slope or undisturbed
- Install along the same contour
- Wrap joints to provide seal between two runs of fence
- Turn ends uphill

Part 91 of P.A. 451, 1994,
Soil Erosion and Sedimentation Control (SESC) Written Plan

To develop an effective sediment control plan, the following information is required. Incomplete applications will not be processed.

1. Soil information: _____
2. Where the earth will be taken from and spoils placed: _____
3. Predominant land features (ex. stream banks, trees, wetland, etc.): _____

4. Slope information (ex. if property at earth change rises 8' in 100' then slope is 8%):

<input type="checkbox"/> No slope (less than 2%)	<input type="checkbox"/> Greater than 2%
--	--

5. Timing and sequence (projects of shorter duration may receive reduced fees)

- Temporary SESC measures placed: _____
- Excavation will begin: _____
- Seeding/permanent measures installed: _____

6. Temporary SESC measures (check all that apply):

<input type="checkbox"/> Silt fence	<input type="checkbox"/> Waddle(s)
<input type="checkbox"/> Straw blanket(s)	<input type="checkbox"/> Slope erosion control devices
<input type="checkbox"/> Sediment log(s)	<input type="checkbox"/> Storm drain protection bag(s)
Other: _____	

7. Maintenance schedule for temporary measures: (check all that apply)

<input type="checkbox"/> Check all devices before <i>and</i> after storm events	<input type="checkbox"/> Empty sediment from storm drain protection bag(s)
<input type="checkbox"/> Remove back-filled debris from silt fence once it is 50% filled	<input type="checkbox"/> Immediately replace damaged silt fence(s) or other sediment control device(s)
<input type="checkbox"/> Do not mow between project and water for greater protection	<input type="checkbox"/> Replace straw/mulch over exposed soils when wind or storms remove
Other: _____	

8. Permanent SESC measures to achieve soil stabilization: (check all that apply)

<input type="checkbox"/> Install shrubs, trees, or other deeply rooted native plants to protect landscape
<input type="checkbox"/> Seed and mulch site no more than 5 days after final grade is achieved
Other: _____
